# CCTV PIPELINE INSPECTION AND SURVEYS

**ENVIRO-CLEAN**

Enviro-Clean operates a large fleet of CCTV units featuring innovative technology, including Zone 1 Ex (explosion proof) cameras for hazardous environments. Our equipment is capable of surveying pipes and culverts ranging from 50mm to 2.5m with cable lengths of up to 500m.

Our industry accredited operatives perform the survey, and provide immediate onsite information to enable remedial works. Once completed the operative uploads the data captured remotely to our CCTV Department. Which on completion, creates an instant report which is then submitted to our client, ensuring an elevated level of quality control as expected.

Enviro-Clean also operates a lateral launch service, revolutionising sewer network inspections. Our high specification, advanced cameras are capable of surveying both the main sewer and 45m of lateral sewer extending towards properties, all without the need to directly access the property. This lateral launch service allows us to identify an issue, offering a solution in a more efficient and cost-effective manner. It does so without the need to directly access the property, thus saving time, inconvenience, and additional cost to you and your client. Our clients can expect a more precise inspection process, leading to better outcomes and greater satisfaction.
