CONFINED SPACE AND EMERGENCY RESPONSE TEAM

ENVIRO-CLEAN

Working in high-risk confined space areas is inherently dangerous, requiring specialised expertise and equipment to ensure safety. At Enviro-Clean, we have established a specialist Confined Space Safety & Rescue Team to support our operations and to be available for hire by other companies in need of confined space entry services.

Our Confined Space Safety & Rescue Team is fully equipped to assist in Category 1 and other difficult confined spaces, offering planning, supervision, and execution of confined space work. This ensures that all tasks are conducted with the utmost safety and efficiency.

Our team is not only adept in the practical aspects of confined space operations but is also thoroughly trained in the relevant regulations, including the Confined Space Regulations 1997 and The Management of Health & Safety at Work Regulations 1999. This deep understanding ensures that our operations comply with the highest safety standards.

In addition to rescue capabilities, our team members are trained in advanced First Aid, ensuring that they can provide critical medical assistance until the arrival of NHS Emergency Services. This level of preparedness is crucial for mitigating risks and ensuring the well-being of all personnel involved.

Our services extend beyond emergency response.

We offer comprehensive planning and supervision for confined space entries, encompassing risk assessments, development of safe working procedures, and implementation of emergency response plans. This proactive approach not only enhances safety but also improves operational efficiency.
