POTABLE WATER TANKERS

ENVIRO-CLEAN

We offer a vast array of potable water services to meet your requirements. We have a fleet of Rigid and Articulated Vehicles available to supply up to 6,000 gallons, in a single load. Our 24/7 service can be mobilised anywhere in Scotland to provide freshwater. We have supported our clients in replenishing on site infrastructure, supplying water for site safety barriers, and water tanks. We can also provide a tanker trailer for distribution which we then replenish using our fleet.

Enviro-Clean is proud to be a first response contractor for Scottish Water. Our dedicated freshwater fleet is used to maintain water supplies where there are challenges in maintaining water service (e.g. pipe bursts).

If you have a requirement for freshwater, we have the experience and equipment ready to service your needs.

**I need a large amount of water delivered;
how do you guarantee delivery?**

Given the size of our fleet and staff levels we can deliver any amount of water at any time and over whatever duration you require it.

**I have a problem with water supply to my building.
Can you supply this?**

Yes, we can supply water into your network or storage tank in the building.

What can you supply water for?

- Drill Rigs
- Batching Plants
- Private Water Supply Tanks
- Water Filled Traffic Barriers
- and more.....
