ENVIRO-CLEAN

Enviro-Clean offers a range of services to private and commercial organisations looking to complete their projects with reliable and efficient tipper solutions. Our fleet of 8-wheel, 32-tonne tippers can carry up to 18.5 tonnes of material per load. We also have articulated tippers which allow us to transport larger quantities of up to 27 tonnes for more demanding projects.

We specialise in the removal of inert, hazardous, and non-hazardous materials from sites, always ensuring safety and cleanliness. This includes the import and export of construction materials and supplying high-quality aggregates such as Type 1 quarried or recycled gravel, fill sand, and pipe bedding, among others. Our wide range of projects includes site clearance, demolition, new builds, and land remediation.

Our tipper fleet works perfectly alongside our plant department on various sites, providing a comprehensive solution for your earth-moving projects. We offer a varied range of operated and self-drive plant equipment to suit projects of any size. Our 22-metre, long reach excavator can reach jobs that others can't, making it ideal for large housing developments, railway and motorway embankments, and canal dredging work. We have also added road brushes to our fleet, ensuring your site is kept clean, safe, and environmentally pleasing.

Enviro-Clean's tipper fleet is utilised for a wide range of projects, including road building, civil engineering, house construction, sewage and water sludge cake transport, and the transportation of stone from quarries. With a fleet of this size, we can move up to 10,000 tonnes of waste per week.

Our strategic location near Scotland's major routes provides a significant advantage for waste and debris removal projects. Additionally, by managing our own recycling centre, we ensure our prices remain competitive and environmentally friendly.
