WASTE VACUUM TANKERS

ENVIRO-CLEAN

Enviro-Clean specialises in comprehensive waste management solutions, operating a large fleet of modern waste tankers designed to handle hazardous and non-hazardous waste efficiently.

Our fleet comprises waste vacuum tankers ranging from 2000 to 6000 gallons (9 to 33m³) in capacity. These tankers are adept at transporting various waste types, including sludge, trade effluents, septic tank waste, oil-water interceptor waste, and other liquid wastes.

For harder-to-reach areas, we deploy our 2000-gallon agricultural slurry tanker and tractor unit. This unit plays a crucial role in supporting our Trac-Vac, allowing uninterrupted waste removal from its debris tank while the equipment continues its operations seamlessly.

Our Vacuum Tankers frequently work with the DISAB Futurion Q20 MultiFLEX on-site. This enables efficient offloading onto the tanker, ensuring minimal downtime for industrial plants and continuous workflow.

Enviro-Clean utilises powerful liquid ring vacuum tankers and tipping units to decant heavy sludges and soils effectively. This capability is crucial in managing a wide range of waste materials across different industries.
